4. ATANGANA Lazare, INS/AR-SU/CE1/CEA2

TO OUR READERS

The Regional Agency of the National Institute of Statistics (NIS) of the SOUTH is very honored to present to you the 2024 edition of the statistical yearbook of the Region. The production of a statistical yearbook is the first deliverable of any Institute. The objective of this document is to make available to users the statistics of the sectoral administrations present in the Region in a cross-cutting reference document, in order to facilitate their popularization and use. Like the 2023 edition, this edition includes 25 chapters organized into 03 main parts: Territory and Climatology, Population and Social Affairs and Economic Activities. The first part situates the SOUTH Region in its physical framework and describes its institutional, administrative and political organization. The second

part highlights information on the socio-demographic characteristics of the Region. Finally, the third part traces the situation of the Region's economy in all areas and presents the situation on the execution of the Public Investment Budget. A presentation of the country's economic indicators from the note on the 2023 national accounts and inflation data is made in this part.

The Head of the Regional Agency of the NIS extends his thanks to all the heads of the sectoral administrations who have worked hard to provide the data contained in this document.

The Regional Agency remains open to comments and suggestions that may improve future editions.

THE HEAD OF THE INS AGENCY FOR THE SOUTH

FOREWORD

The country has equipped itself with the National Statistical Information System (SNIS) which brings together all the structures producing statistics for the needs of the functioning of the State of Cameroon. The National Institute of Statistics is the central element. As such, its main mission is to produce and make available to the public the statistical data necessary for the evaluation of policies and decision-making. The production of the regional statistical yearbook is part of the National Strategy for the Development of Statistics (SNDS) whose objective is to ensure the availability of quality official statistics.

Work on the production of the 2024 edition of the Statistical Yearbook of the SOUTH Region begins during the validation workshop of the previous edition; with the resulting guidelines and

recommendations. Then comes the preparation of the introductory letters and collection sheets, the descent into the sectoral administrations for data collection and the entry and consistency of the data. Following this, a validation workshop is organized to ensure the accuracy of the data to be included in the final document. Finally, a rereading is done to correct any errors.

The National Institute of Statistics thanks the public and private sector administrations that contributed to the production of this document. Through this collaboration, they participate in the animation of the (SNIS) as actors at the level of the SOUTH Region.

THE DEPUTY DIRECTOR GENERAL OF THE NIS

SHE ETOUNDI JOSPEH GUY BENJAMIN

ADMINISTRATIVE AND ROAD MAP OF THE SOUTH REGION

Source : MINTP-INS IRR 2018

PART ONE:
TERRITORY AND CLIMATOLOGY

Chapter 1 : LANDSCAPE

1) LOCALISATION

The SOUTH Region was created by Decree No. 2008/376 of November 12, 2008, on the organization of the Republic of Cameroon. It inherited the former South Province, created on August 22, 1983 by the break-up of the former Center-South Province. It is placed under the authority of a Governor, depositary or custodian of the authority of the State in the Region.

The SOUTH Region is bordered on the:

- ❖ North-west by the Littoral Region, in particular the Sanaga Maritime division;
- ❖ North by the Center Region with the divisions of Nyong and So'o, Nyong and Kellé and Nyong and Mfoumou;

- ❖ East by the Eastern Region with the Haut-Nyong division.
- ❖ The southern part of the Region borders three countries: EQUATORIAL GUINEA, GABON and THE REPUBLIC OF CONGO.

This Region has a coastline on the Gulf of Guinea, which occupies its entire western flank.

With an area of 47,191 km², the South Region is divided into four Departments: Mvila, Dja and Lobo, Ocean and Ntem Valley.

Rainfall is abundant and temperatures are moderate.

2) RELIEF

The relief is dominated by the South Cameroon plateau with a varying altitude between 0 and 1000 m. We find there:

- ❖ A plateau to the East culminating at 1000 m;
- ❖ A 150 km long Atlantic coastal plain south of Kribi;
- ❖ A succession of convex hills whose altitude varies between 650 and 900 m;

- ❖ A plain to the East and North-East.

There are yellow ferralitic soils on Gneiss covering most of the territory and red ferralitic soils and a sedimentary plain along the coast.

3) HYDROGRAPHY

Two basins make up most of the hydrographic network of the SOUTH Region: the Atlantic basin and the Congo basin with rivers:

- ❖ The So'o which originates near Sangmelima
- ❖ The 460 km long Ntem begins in Gabon
- ❖ The Lokoundje which joins the Atlantic Ocean near the Nyong estuary

The Congo Basin is represented in the Region by:

- ❖ The Dja River which rises South-East of Abong-Mbang.
- ❖ The Lobe and the Kienke which reach the Atlantic Ocean by a series of rapids.

4) FLORA AND FAUNA

The plant cover is made up of two large forest formations: the dense humid forest with two variants (low-altitude ombrophile coastal and

Congolese or Dja evergreen and the dense humid forest with one variant (swamp forest).

Chapter 2 : CLIMATOLOGY

1) PRESENTATION

The climate in the SOUTH Region of Cameroon is of the warm equatorial type. It has low temperatures varying between 20°C and 25°C with a fairly high and constant humidity level. This climate is characterized by a bimodal rainfall regime consisting of two rainy seasons: March-June (short rainy season) and September-November

(long rainy season); and two dry seasons: December-February (long dry season) and July-August (short dry season). The Region has two weather stations.

2) SOURCES

The data presented below are provided by the regional delegation of Transport in the SOUTH.

Chapter 3 : ADMINISTRATIVE AND POLITICAL ORGANISATION

1) THE MAJOR LANDMARKS IN THE HISTORY OF THE REGION

- August 22, 1983: Creation of the South Province by splitting the former Center-South Province into two.
- November 12, 2008: Changing “Provinces” to “Regions” and “Districts” to “Sub-divisions” .
- November 24, 2017, creation, administrative and academic and organisation of the National Technical High School of University of Yaounde I at Ebolowa.
- 2015, creation of the annex of the Faculty of Legal and Political Sciences (FLPS) of the Yaoundé II university at Ebolowa
- 2022, 06 janvier 2022: Creation by the President of the Republic of Cameroon of the University of Ebolowa by the decree N°2022/009 of January 6 2022.

2) ADMINISTRATIVE ORGANISATION

Created by presidential decree of November 12, 2008, the SOUTH Region, like all the Regions of Cameroon, is placed under the authority of a Regional Governor. Representative of the President of the Republic. He is the depositary of State authority in the Region.

The SOUTH Region is divided into four Divisions or departments. Each Department is headed by a senior divisional officer appointed by Presidential decree

Each Division is divided into sub-divisions headed by a sub-divisional officer. The South Region has 29 sub-divisions since 2008. Mayors head the municipalities, which have the same territorial limits as the sub-divisions. Furthermore, the Region has 2 urban communities: The Urban Community of Ebolowa and the Urban Community of Kribi.

3) SOURCES

The informations presented in this chapter were obtained by analyzing documents produced by the Governor's offices. Those relating to the results of the electoral consultations are taken from the minutes recorded and published in the bilingual

daily "Cameroon Tribune". As for data on legalized political parties and electoral lists, they were provided by the regional service of ELECAM for the SOUTH.

PART TWO :
POPULATION AND SOCIAL AFFAIRS

Chapter 4 : CHARACTERISTICS OF THE POPULATION

1) PRESENTATION

According to the estimates of the population data of the South Region of 2015, it appears that this population is mainly young. Its representation on a pyramid of ages has a fairly wide base and a tapered top. In 2015, the distribution of the population by sex is almost identical between 0 and 54 years old, then at over 54 years, we observe a drop in the number of male populations.

With regard to graph 2, we notice that the total population of the South region has increased from 634,655 inhabitants to 749,552 inhabitants from 2005 to 2015, i.e., a growth of 15.3% in 10 years.

2) DEFINITIONS

Population: This is the number of people residing in Cameroon on a given date. The same definition was considered in the 1976, 1987 and 2005 censuses.

Population density: It is an indicator that shows the relationship between the population and

the area on which this population lives. Population density is obtained by dividing the total population by the area of the territory, and is generally expressed in inhabitants per km².

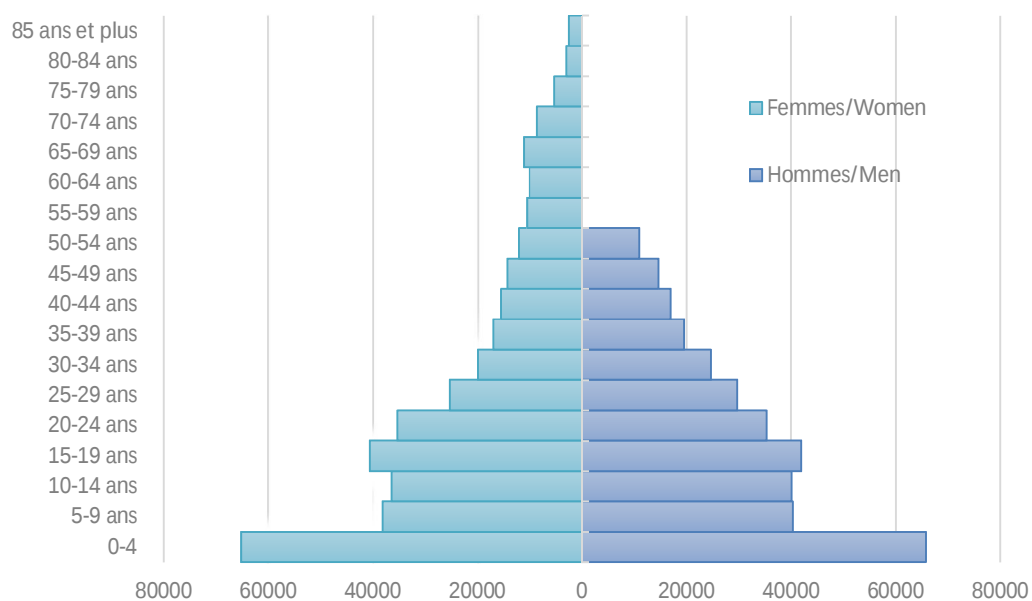

3) SOURCES

The data presented in this chapter comes from the regional reports on the profile of Decentralized Territorial Communities recorded in 2016 and from the national report. These documents were produced by FEICOM under an agreement with the NIS. Population estimations and projections for the years 2010 to 2014 have been updated using the results of the 2005 census with information

changing in the components of the population. This was done by taking into consideration the documents: "Presentation report of 2005 results", "State of the population-indicators" and "The population of Cameroon in 2010" published by BUCREP.

Chapter 5 : HOUSING AND LIVING CONDITIONS

1) PRESENTATION

The activity of establishing cadastral plans in the SOUTH Region experienced an exponential increase in 2020. During the years 2021 and 2023, this number always exceeded 1000 with a low in 2022 with only 932 cadastral plans established. Regardless of the year, the OCEAN division records the highest number of cadastral plans established. As for land titles, the trend is around 1,200 minimum land titles per year with peaks of 1,534 in 2020.

As for land income, there was also a clear improvement in 2020 compared to 2019. After a

drastic drop in 2021, they have started to rise again to reach 715.371 million in 2022 and 674.203 million in 2023.

Housing conditions are described from several angles (housing characteristics, occupation and hygiene status, access to water, energy for lighting and cooking). According to the results of the ECAM4, approximately 54% of households in the South own their homes and only 2.8% have land titles.

2) DEFINITIONS

Poverty: State of a person who does not have sufficient resources and conditions allowing him to live with dignity according to the legitimate and vital rights of the human person. Poverty is generally apprehended by the triptych of insufficient income, precariousness and exclusion.

Incidence of poverty or poverty rate (in %): Ratio between the number of individuals living below the poverty line and the whole population.

Depth of poverty: Average relative gap between the poverty line and the average expenditure of poor households

Severity of poverty: Average of the squares of the differences between the poverty line and the average expenditure of poor households. It measures the distribution of poor household expenditure around the average expenditure of poor households.

Wall material is rudimentary type if it is in bamboo with mud, stone with mud, uncovered adobe, plywood, cardboard, reclaimed wood.

The wall material is elaborated type if it is made of cement, stone with lime, cement, bricks, cement blocks, coated adobe, wooden plank/shingles.

The following materials are considered as rudimentary roof materials: mat, palm, bamboo, wooden planks, cardboard.

The following materials are considered as elaborated roof material: sheet metal, wood, zinc/fiber cement, tiles, cement, shingles.

The main soil material is natural if it is earth, or sand.

The main material of the floor is of the rudimentary type if it is made of wooden planks, palms, bamboo.

The main material of the floor is elaborate if it is made of parquet or waxed wood, vinyl strips / asphalt, tiles, cement, carpet.

A toilet is shared if it is used in addition to household members by members of one or more households other than the one to which the toilet belongs.

Improved toilets are those with either a flush or manual flush connected to a sewer system, or a flush or manual flush connected to a septic tank, or a flush or manual flush connected to a cesspool. Also included are improved self-ventilated cesspools and cesspools with a slab.

3) SOURCES

The data presented in this chapter come from activity reports produced by the Regional Delegation of Domains, Cadastre and Land Affairs

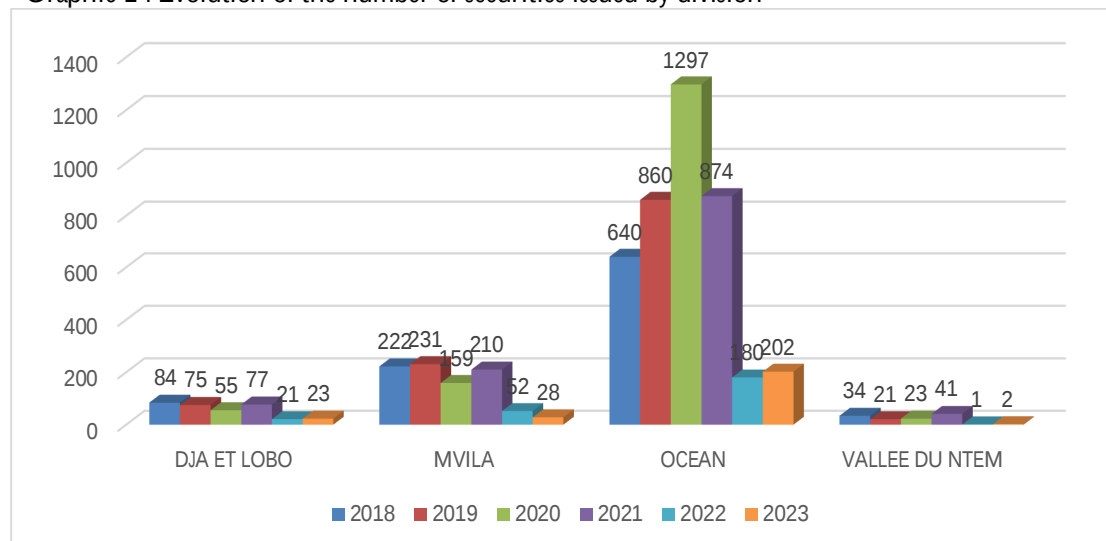

and from survey reports conducted by the National Institute of Statistics. Here the data from the EC-ECAM4 have been used extensively.

Chapter 6 : BASIC EDUCATION

1) PRESENTATION

The objective for primary education is to increase access to basic education for all school-age children and to keep them in the system until the end of the cycle.

All orders and sub-systems of education are present in the Region with a strong dominance of the public education order and the francophone sub-system.

In terms of nursery education, we went from 24,724 students in 2020/2021 to 24,331 students for the 2021/2022 school year. The latter workforce is distributed among 670 nursery schools for 1,549 classrooms, 1,037 of which are

built with permanent materials and 512 with temporary materials. Among the 670 nursery schools identified in the region, only 177 have latrines and 107 have drinking water.

In primary education, enrollment stands at 179,941 students in 2020/2021 compared to 186,322 in 2021/2022. The number of students in 2021/2022 is divided into 159,285 for the public and 27,037 in the private sector. This number of students is supervised by 4,751 teachers with a slight predominance of women and distributed in 1,099 schools.

2) DEFINITIONS

Pre-school education: Education received before entering primary school. It generally includes two sections (petite or 2ème section, grande or 1ère section) or three sections (petite or 3ème section, moyenne or 2ème section, grande or 1ère section).

Primary education : There are SIL (section d'initiation liminaire), CP (cours préparatoire), CE1

and 2 (cours élémentaire première et deuxième année), CM1 (cours moyen première année) and CM2 (cours moyen deuxième année). The cycle ends with the CEP (Certificat d'Étude Primaire) exam in CM2, or FLSC (First Living School Certificate).

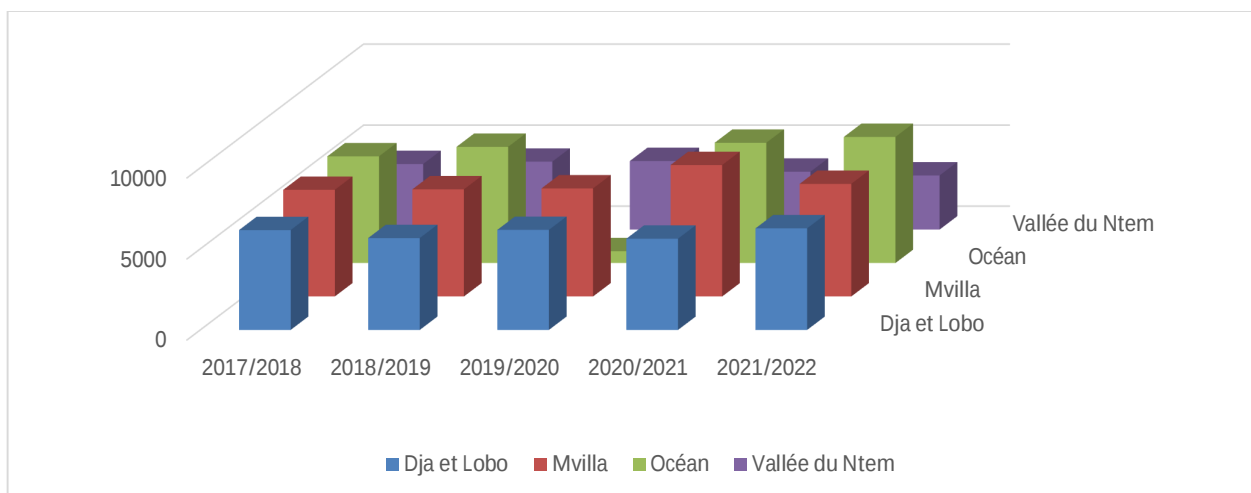

3) SOURCES

The data in the tables below come from the school mapping services of the MINEDUB, Regional Delegations of the SOUTH. These data are collected

through direct surveys of nursery, primary and secondary schools in the different sub-systems.

Chapter 7 : SECONDARY EDUCATION

1) PRESENTATION

In secondary, it is a question of operationalizing technological and professional sectors.

All orders and subsystems of education are present in the Region with a strong dominance of the public education order and the French-speaking subsystem.

During the year 2021/2022, there was a clear increase in student numbers in technical education, going from 19,083 students during the 2019/2019 school year to 20,458 students in 2020/2021 for 61 establishments. As for general education, this number

has seen a slight decline. This number is 58,217 students in 2020/2021 compared to 60,675 students in 2019/2020 distributed unevenly across 161 establishments. During the year 2023/2024, there was a clear increase in the number of students in technical education, from 25,314 students in the 2022/2023 school year to 27,264 students in 2023/2024 for 66 establishments. As for general education, this number has rather seen a slight increase. This number is 58,895 students in 2023/2024 compared to 58,506 students in 2022/2023, distributed unevenly across 168 establishments..

2) DEFINITIONS

First cycle general secondary education: There are classes of 6eme, 5eme, 4eme and 3eme. The cycle ends with the examination of the BEPC (Brevet d'Etudes du Premier Cycle).

Second cycle general secondary education: There are classes of Seconde, premiere and Terminale. The cycle ends with the BAC (Baccalaureat) exam in Terminale, or GCE Advanced level, after having obtained the probatoire exam in premiere

First cycle technical secondary education: There are 1st year, 2nd year, 3rd year and 4th year classes. The cycle ends with the examination of the CAP (Certificate of Professional Aptitude) in the 4th year.

Second cycle technical secondary education: There are classes of Seconde, premiere and Terminale. The cycle ends with the probatoire exam in premiere and the BAC (Baccalaureat) exam in Terminale.

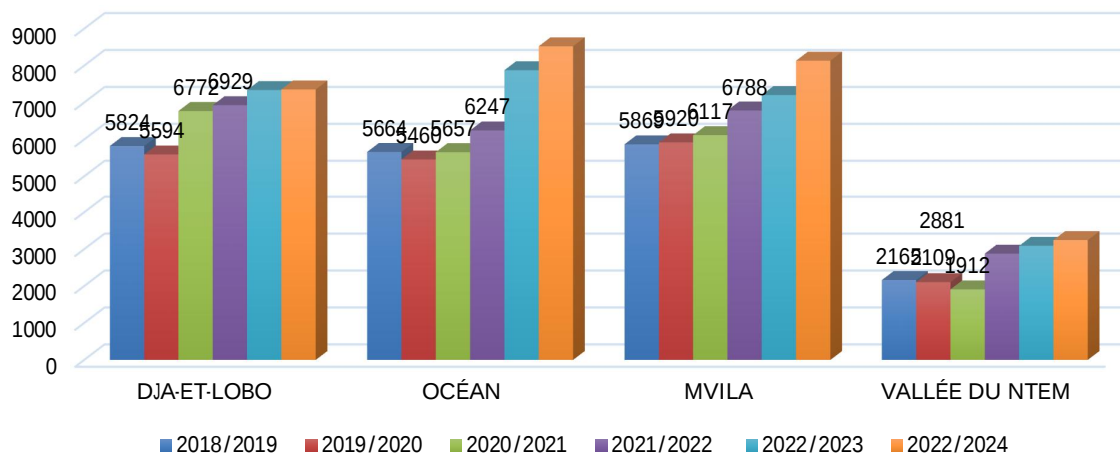

3) SOURCES

The data in the Tables below come from the school map services of the Regional Delegation of MINESEC in the SOUTH. These data are collected

through direct surveys of secondary education establishments, of the various subsystems.

Chapitre 8 : ENSEIGNEMENT SUPERIEUR

1) PRESENTATION

Higher education includes all training and other post-secondary education provided by public and private institutions. Some training is governed by International Conventions that define the content in order to ensure the universality of the end-of-training diploma. Other training is specific to the country. Law No. 005 of April 16, 2001 on the orientation of higher education gives this level of education the fundamental mission of producing, organizing and disseminating scientific, cultural, professional and ethical knowledge for the development of the nation and the progress of humanity.

The SOUTH Region has 01 University called UNIVERSITY OF EBOLOWA (UEb)

created by decree No. 2022/008 of January 5, 2022. It has four (04) Faculties [Faculty of Legal and Political Sciences (FSJP), Faculty of Arts, Letters and Human Sciences (FASLH), Faculty of Economics and Management (FSEG), Faculty of Sciences (FS)] and its five (05) major schools [Higher Normal School of Technical Education (ENSET), Higher Institute of Agriculture, Wood, Water and the Environment (ISABEE), Higher School of Transport, Logistics and Commerce (ESTLC), National Higher School of Maritime and Oceanic Sciences and Technologies (ENSTMO), Faculty of Medicine and Pharmaceutical Sciences (FSMP)].

2) SOURCES

The data in this chapter are provided by the UNIVERSITY OF EBOLOWA and concern the number of teachers, the number of students as

well as the infrastructures. The data series is recent because the academic activities started just two years ago.

Chapter 9 : HEALTH

1) PRESENTATION

In order to achieve the objectives, MINSANTE has adopted a division within the Regions which is different from the administrative division. Thus, we must distinguish: the health district; the health area; and health training. Following the pyramid of health facilities, the Southern Region has 1 3rd category hospital, 10

4th category hospitals, 21 5th category hospitals and 176 6th category hospitals.

In this edition, data from major health facilities such as: Ebolowa Regional Hospital, Ebolowa Regional Hospital, Sangmelima Reference Hospital and Ebolowa Military Hospital will be presented.

2) DEFINITIONS

Prevalence of underweight (weight-for-age): Percentage of children under 5 years old whose weight-for-age ratio is below 2 or 3 standard deviations from the reference weight-for-age ratio of the WHO standard.

Prevalence of stunting (height-for-age): Percentage of children under 5 years old whose height-for-age ratio is below 2 or 3 standard deviations from the reference height-for-age ratio of the WHO standard.

Prevalence of wasting (weight-for-height): Percentage of children under 5 years old whose weight-for-height ratio is below 2 or 3 standard deviations of the reference weight-for-height ratio of the WHO standard.

Overweight Prevalence (weight-for-height) or Overweight Prevalence (sometimes called Obesity Prevalence): Percentage of children under 5 years old whose weight-for-height ratio is above 2 or 3 deviations -types of the reference weight-for-height ratio of the WHO standard.

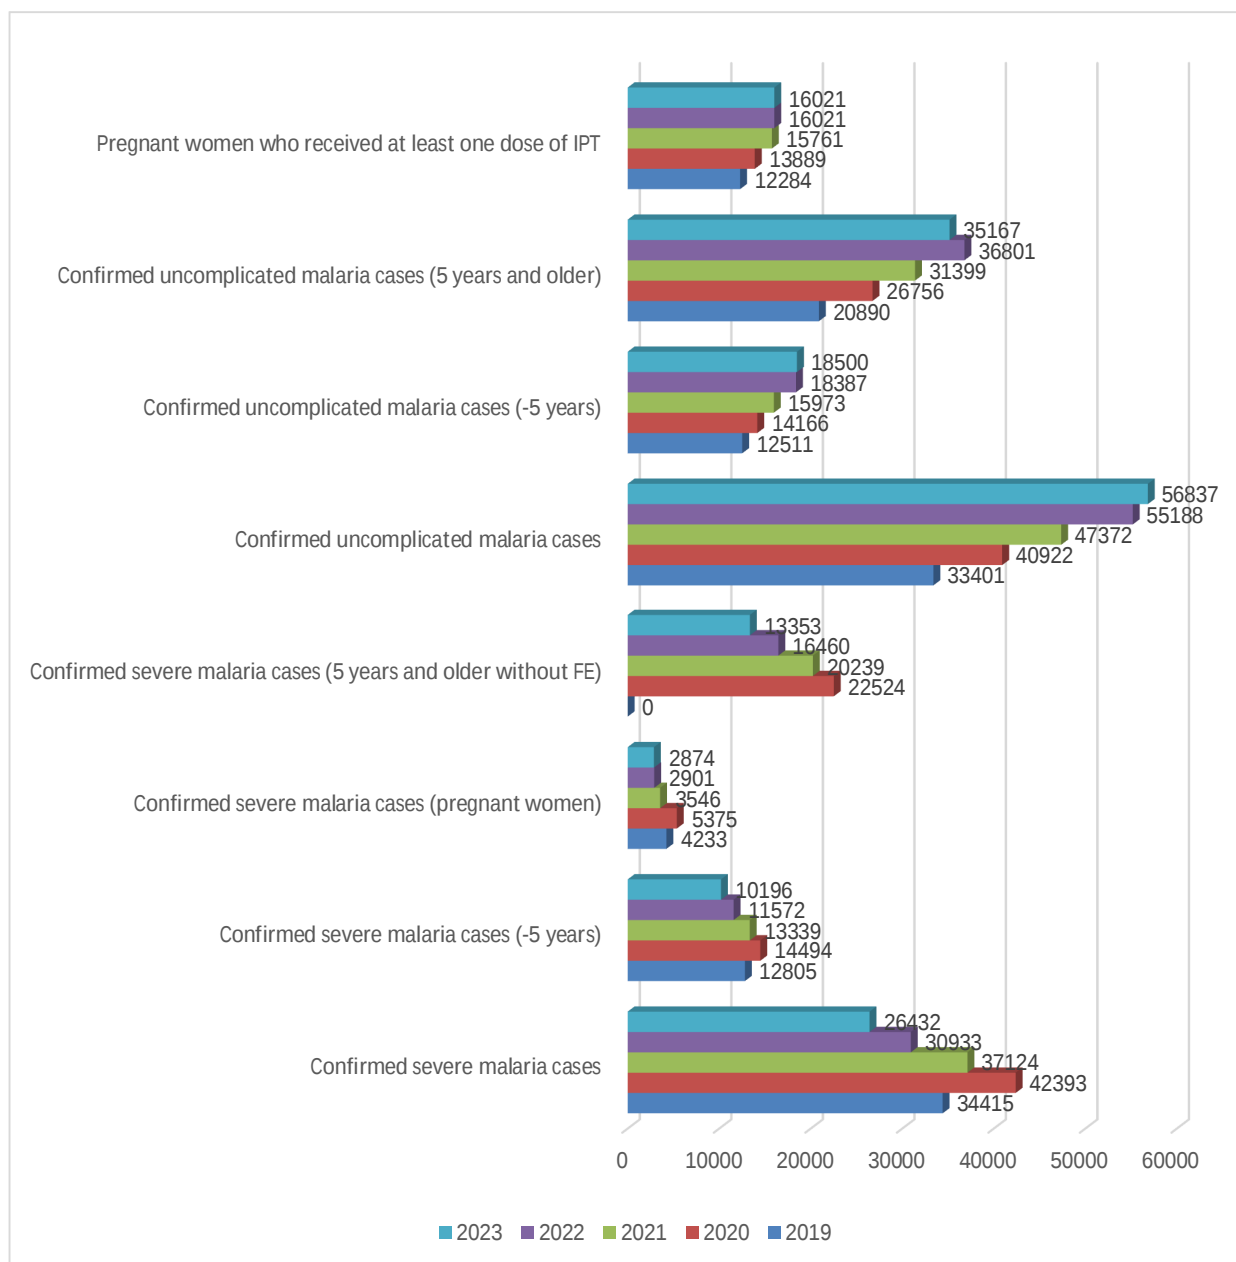

3) SOURCES

The data in this chapter are collected at the level of the Ebolowa Regional Hospital, the military hospital, the Sangmelima reference hospital, health districts and the South Regional Public Health delegation. For certain indicators, we

used the publications of the National Institute of Statistics (Multiple Indicator Cluster Survey and Demographic and Health Survey, the Complementary Survey to the Fourth Cameroonian Household Survey) were also used.

Chapter 10 : WORK, SOCIAL PROTECTION AND INSURANCE

1) PRESENTATION

The family is the basic unit of society and its well-being is a permanent concern of public authorities. This is how an entire ministry was created in charge of family problems and, incidentally, women. Actions carried out in favor of the family and women include, for example, support for agricultural equipment,

collective wedding celebrations, family marital therapy, technical support for associations, raising awareness among parents about the supervision of adolescents, etc. The training of young girls in small trades is also a responsibility of MINPROFF through the Centers for the Promotion of Women and the Family.

2) SOURCES

All the data in this chapter is provided by the regional delegation for the Protection of Women and the Family.

Chapter 11 : JUSTICE

1) PRESENTATION

According to the provisions of Article 37 paragraph 2 of Law No. 96/06 of January 18, 1996 amending the 1972 Constitution, judicial power in Cameroon is exercised by the Supreme Court, the Courts of Appeal and the Courts.

The proper functioning of the public service with regard to the rights and duties of citizens in the South region is ensured by two entities: The Judicial Administration and the Penitentiary Administration.

Judicial administration in the South is ensured by: a Court of Appeal, a Military Court and an Administrative Court sitting in the capital

of the Region, four (04) Intermediate Courts (TGI), Seven (07) Courts of First Instance (TPI), etc.

In terms of supply, the prison administration has had 6 detention centers since 2020 compared to 5 respectively in 2019, for 276 prison security personnel during the same period.

These detention centers have in 2023, 1,372 detainees distributed in the 06 penitentiary establishments for a total capacity of 700 detainees. Among these detainees, only 629 are tried and convicted; or 743 accused awaiting trial (54.15%).

2) DEFINITIONS

Conviction: it is either a decision which obliges a person to pay or to do or not to do something (in civil matters), or a decision which declares a person guilty of having committed an offense and imposes a sentence (in criminal matters).

Convicted: it is in criminal matters, the person who is found guilty of having committed an offense.

Decision: the judge renders a decision when deciding a dispute. We speak of judgment when the decision is made by a court.

Deliberate: is the term that designates the work of reflection by the judge(s) in order to render

his or their decision. For an assize court, we speak of deliberation. When the judge announces that the case is "taken under advisement", this therefore means that he will examine all the documents in the file as well as the procedural documents in order to be able to render his decision. In practice, decisions are rendered 1 to 2 months after the pleadings in civil matters.

Accused: it is a person to whom an investigating judge accuses one or more offenses included in an indictment.

Offense: it is an action or behavior prohibited by law and subject to criminal penalties. There are three categories of offense: fines, misdemeanors and felonies.

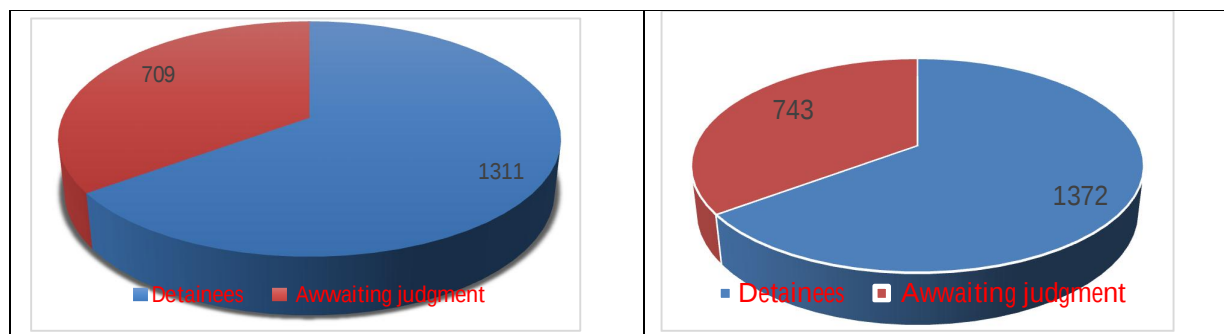

3) SOURCES

The information contained in this part comes from the services of the Court of Appeal, the General Prosecutor's Office and the Regional

Delegation of the Prison Administration of the SOUTH

Chapter 12 : SECURITY

1) PRESENTATION

The security situation remains a major concern for public authorities, particularly in the SOUTH Region. So alongside classic crimes we observe new forms such as cybercrime, corruption, motorcycle theft.

This is how the National Gendarmerie and National Security fight on a daily basis against serious crime, serious banditry and road insecurity so that all resident

populations live peacefully and easily go about their various activities.

As part of their activities, the Legion of Gendarmerie carries out, among other things, instructions to the prosecution, preliminary investigations, flagrant investigations and referrals of individuals. The SOUTH Regional Delegation for National Security also carries out the same activities with a few nuances.

2) SOURCES

The figures presented in the tables of this chapter come from the Legion of Gendarmerie of the SOUTH and the

Regional Delegation for National Security of the SOUTH.

Chapter 13 : EMPLOYMENT AND INCOME

1) PRESENTATION

The most recent data on employment and unemployment come from the Third Survey on Employment and the Informal Sector (EESI3) carried out in 2021 by the INS. The results provided by this survey were based on the resolutions of the 19th International Conference of Labour Statisticians (19th ICLS) and unlike those of EESI2 obtained on the basis of the resolutions of the 13th ICLS. In this chapter, the results will be presented according to the resolutions of the 13th ICLS for

EESI2 and EESI3 and according to the 19th ICLS for EESI3 only. The 19th ICLS brought about a profound overhaul in the way of approaching employment and unemployment, which implies the non-comparability between results obtained according to the resolutions of the 13th and 19th ICLS. Furthermore, according to the 13th ICST, employment and unemployment concern people aged 10 and over, whereas according to the 19th ICST it is for people aged 14 and over.

2) DÉFINITIONS

The ILO participation rate is the ratio of the population employed or actually looking for work to the population of working age. In other words, it is the ratio of employed and unemployed persons in the ILO sense to the working age population.

Extended labor force participation rate: this considers, in addition to employed persons and those who have sought employment, those who have not sought employment (because of discouragement) but who are available for work as a proportion of the working-age population.

Pluri-activity rate: this is the ratio of the number of people with one or more secondary jobs to the employed population.

Employment rate: the ratio of the employed labor force to the working age population. This indicator measures an economy's ability to utilize its labor resources. The closer this rate is to the participation rate, the stronger the capacity of an economy to use its human resources.

Unemployment in the ILO sense of the term: it considers the fact of not having worked (even if only for an hour) during the last 7 days preceding the survey, but actively seeking work and being available for any job opportunity that might arise. The active search criterion distinguishes it from extended unemployment, which includes unemployed persons who report being available for

work but who have not taken steps to offer themselves a job.

Unemployment rate: the ratio of the number of unemployed people (the unemployed) to the labor force (employed and unemployed)

Visible underemployment: This is a situation that characterizes employed people who involuntarily work less than 35 hours per week in their main job, for reasons related to the employer or because of poor economic conditions.

Invisible underemployment: this is the situation of the employed person whose hourly income from the main job during the reference month is lower than the standard set by the regulations in force. The value of this standard is equal to the ratio of the minimum wage (28,500 CFA francs in Cameroon) to the number of hours worked per month calculated based on 40 hours of work per week (i.e. 165.698 CFA francs/hour). The level of income from employment and the number of hours devoted to the main job are the elements that determine the situation of invisible underemployment.

Overall underemployment as defined by the ILO: Overall underemployment synthesizes all forms of distortions in the labor market. To this end, it includes unemployment, visible underemployment and invisible underemployment.

3) SOURCES

The employment statistics presented in this chapter come from various surveys conducted by the National Institute of Statistics, the National Employment Fund, and the regional representation of the Ministry in charge of employment issues in

Cameroon. The FNE provided information on formal and on-the-job training in selected areas, primarily in the agricultural and service sectors.

Chapter 14 : YOUTH AND SPORT

1) *PRESENTATION*

Since 2016, we have had the advent of the Triennial Special Youth Plan (PTS Jeunes) which has three devices. The National Youth Observatory (ONJ) is responsible for registering young people. The PAJER U is now in charge of youth training. The Fonds d'Insertion des Jeunes (FONIJ) is concerned with financing youth activities. These three organizations are under the supervision of the Ministry of Youth and Civic Education. They are the devices that accompany young people in their integration into the world of work and entrepreneurship.

The number of socio-educational structures has remained stable over time in each department.

However, there has been a decrease in the number of young people registered with FONIJ/PAJER U (12,048 in 2020, 119 in 2021 and 53 in 2022 and 2023). The number of projects financed by FONIJ is also decreasing, from 270 in 2020 to 53 in 2023. The amounts of funding granted (in thousands of CFA francs) are also falling, from 538,525 in 2020, 91,844 in 2021, 76,496 in 2022 to 10,797 in 2023. The number of sports infrastructures has not changed since 2020 and the data on the number of licenses by sports discipline is incomplete.

2) *SOURCES*

The data used in this chapter come from the Regional Delegation of the Ministry of Youth and Civic Education

and the Ministry of Sport and Physical Education in the SOUTH Region.

Chapter 15 : TOURISM, ARTS AND CULTURE

1) PRESENTATION

Culture is a constitutive element of any society. It is involved in the ways of thinking, the lifestyles and the value systems of any society. It can even be considered as the identity card of a people. The Arts and Culture sub-sector is monitored here in relation to indicators such as the number of cultural infrastructures, the number of musicians, visual

artists or craftsmen, among others. There is a consistency in the indicators until 2016. After 2016, the various indicators are on the rise. For example, the number of cultural infrastructures increased in 2017, the number of declared artisans and traditional dance groups.

2) DEFINITIONS

Culture: UNESCO defines culture as the set of distinctive spiritual, material, intellectual and emotional features that characterize a society or social group and that encompasses, in addition to art and literature, lifestyles, ways of living together, value systems, traditions and beliefs (UNESCO, 2001).

Museum: According to the International Council of Museums (ICOM), a museum is "a permanent, non-profit institution, in the service of society and its development, open to the public, which acquires, conserves, studies, exhibits and transmits the tangible and intangible heritage of humanity and its environment for study, education and enjoyment" (ICOM, 2007)

Cultural landscapes are the "combined works of man and nature" and express a long and intimate relationship of peoples with their environment (UNESCO, 2007).

Cultural heritage consists of objects, buildings, groups of buildings and sites with symbolic, historical, artistic, ethnological, anthropological, scientific and social value.

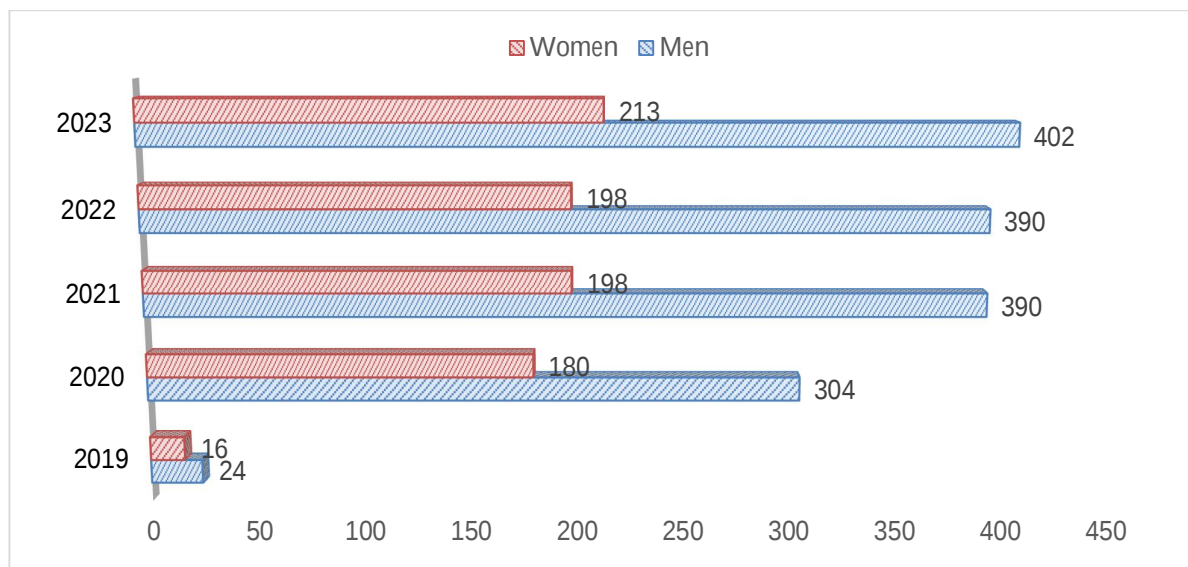

Intangible cultural heritage is "the practices, representations, expressions, knowledge and skills - as well as the instruments, objects, artefacts and cultural spaces associated with them - that communities, groups and, where applicable, individuals recognize as part of their cultural heritage. This intangible cultural heritage, transmitted from generation to generation, is continuously recreated by communities and groups in response to their environment, their interaction with nature and their history, and provides them with a sense of identity and continuity, thus promoting respect for cultural diversity and human creativity" (UNESCO, 2003 b).

3) SOURCES

All information related to culture is mainly obtained from the Regional Delegation of Culture and Arts.

PART THREE :
ECONOMIC ACTIVITIES

Chapter 16 : AGRICULTURE

1) PRESENTATION

The SOUTH Region belongs to the agro-ecological zone of humid forests with bimodal rainfall and which opens to the sister Republics of Gabon, Equatorial Guinea and Congo Brazzaville. This opening is an opportunity for land exchanges of food and livestock products. Only information

on trade with Gabon and Equatorial Guinea is presented here. Exchanges with Congo are still at the informal stage because they are carried out by motorbike along the tracks which connect the two countries.

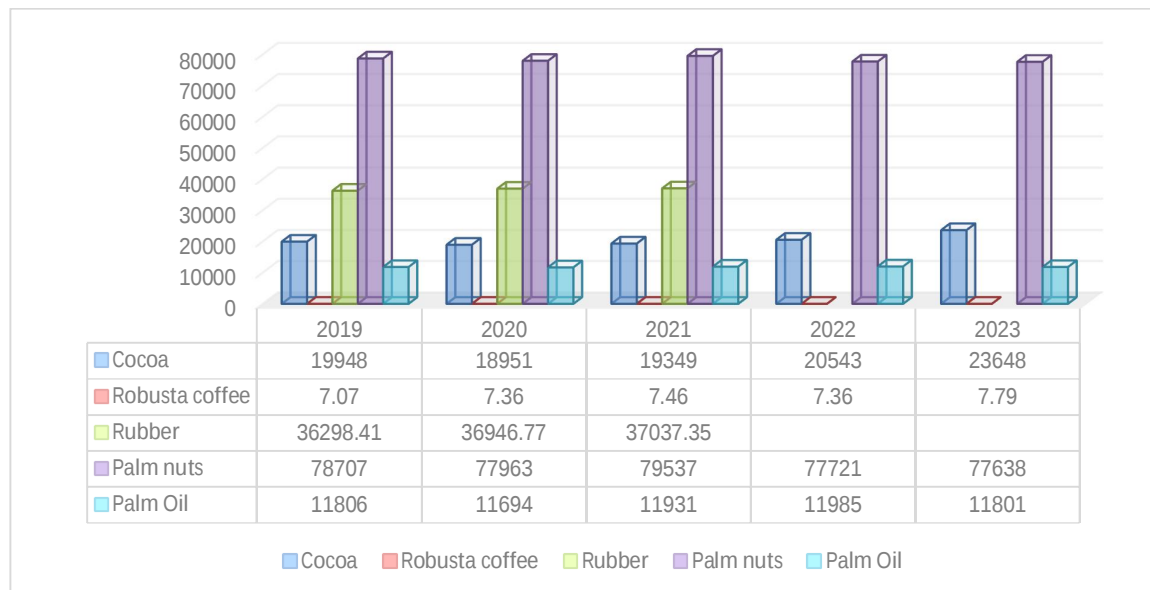

2) SOURCES

The data in the tables in this chapter come from the semi-annual and annual reports of the Regional Delegation of Agriculture and Rural Development and those of the Regional Delegation

of Livestock, Fisheries and Animal Industry. Information on cross-border trade is collected at border phytosanitary police stations.

Chapter 17 : BREEDING AND FISHING

1) PRESENTATION

Livestock farming is monitored through the evolution of cattle, goat, sheep, poultry and pig herds. The cattle herd is down between 2022 (1,615) and 2023 (2,539). The goat, sheep and pig herds are increasing in numbers between these two consecutive years. The poultry herd is increasing especially for the Village Chicken varieties (146,439 heads in 2022 compared to 181,351 in 2023) and Broiler Chicken (300,186 heads in 2022 compared to 356,065 in 2023). Despite the absence of data from the NTEM VALLEY department in 2023, the production of table eggs in kg is up compared to 2022. It goes from 8,325,986 kg in 2022 to 13,384,630 kg in 2023. The number of heads slaughtered in slaughterhouses is down regardless of the type of livestock considered.

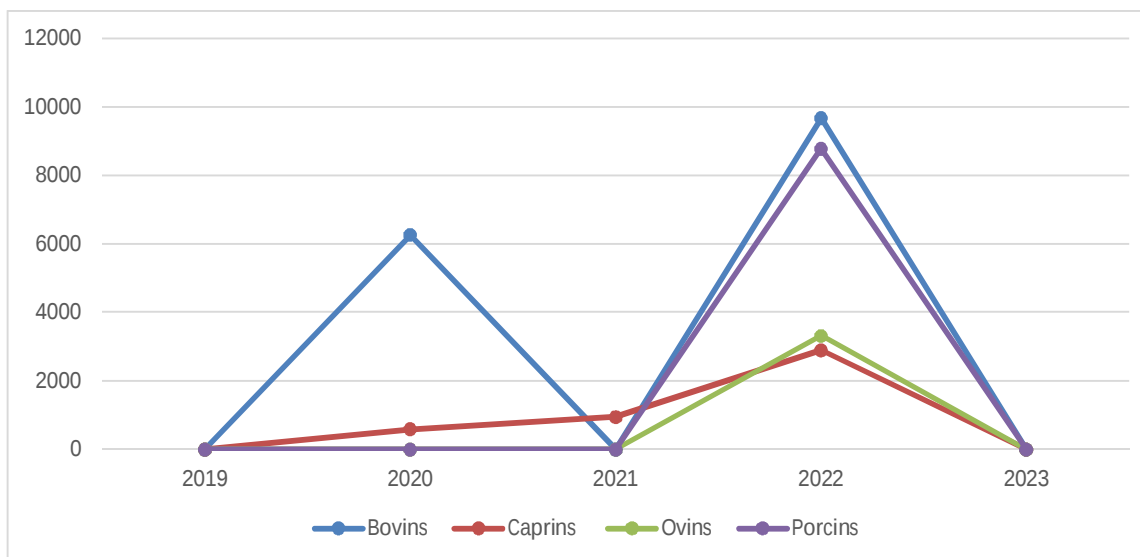

The data on fishing concerns the number of fishermen, the number of fishing gear used and fish production. There were 2,055 fishermen in 2023 and 2,048 in 2022. The production of maritime artisanal fishing is almost stable between 2022 (522 tonnes) and 2023 (524 tonnes) while continental artisanal fishing is increasing (278.8 tonnes in 2022 to 304 tonnes in 2023). As for poultry, it appears that the numbers have increased for village chickens and broilers and decreased for laying chickens. Indeed, the numbers of village chickens range from 146,439 in 2022 to 181,351 in 2023, those of broilers range from 300,186 to 356,065 between 2022 and 2023 and finally the numbers of laying chickens fall from 26,518 in 2022 to 22,871 in 2023.

Chapter 18 : COMPAGNY

1) *PRESENTATION*

This chapter focuses on the entities listed with the Regional Delegation of Small and Medium Enterprises and Crafts, the activities of the Regional Trade Delegation, mining research companies and the general level of prices of final consumer products in the town of Ebolowa.

Companies belong more to the tertiary sector and the mining exploration sector. Commerce activities revolve around the sale of consumer products at low prices.

2) *SOURCES*

The data in this chapter comes from the Regional Delegation of Small and Medium Enterprises, Social Economy and Crafts, the Regional Delegation of

Mines, Industry and Technological Development and the Regional Delegation of Commerce.

Chapter 19 : TRADE

1) PRESENTATION

This chapter focuses on the activities of the Regional Trade delegation during the year 2023. These activities revolve around monitoring the approved prices of products and the sale of consumer products at low or approved prices.

This is how the departmental delegations and the regional delegation regularly organize promotional sales of products.

2) DEFINITIONS

Control market: fixed market or fixed shop where prices are lower than elsewhere.

Periodic market: market held on specific days of the week.

RRI: Rapid Results Initiative.

1) SOURCES

Data presented in this chapter come from the Regional Delegation of TRADE.

2) *LIST OF TABLES*

Chapter 20 : FINAL HOUSEHOLD CONSUMPTION PRICES

1) PRESENTATION

In recent years, the country has experienced a general increase in the prices of household final consumption products. This was due to the COVID 19 pandemic with its barrier measures, the conflict between Russia and Ukraine and the double increase in fuel prices at the pump. This resulted in prices remaining at high levels. In order to take this new state of affairs into account, the INS carried out price rebasing work by taking the prices for the year 2022 as the reference price. Those prices now serve as the basis for calculating inflation.

The tables below show a general increase in the price index in the city of Ebolowa during the months of 2023. Indeed, the general price index rose from 103.3 in January 2023 to 109.2 in December 2023. The general price level in 2023 stands at 103.3, representing an inflation of 3.3% compared to 2022. This increase is mainly due to the Transport function (125.6) and to a lesser extent the Food products and non-alcoholic beverages function (109.2).

2) METHODOLOGY

Every week, two temporary INS agents carry out price readings of certain household consumption products in the markets/shops/points of sale in Ebolowa and Mengong. Some products are purchased and weighed and the price/weight ratio is tracked. After processing, the INS produce an index which indicates the variation in product prices. It is this index which is presented by product group or by consumption function.

The indices presented here are obtained after analyzing the prices recorded on household final consumption products. The prices recorded are used to calculate series of indices by the Laspeyres method. These price surveys are a continuous activity of the Institute and are part of the monitoring of inflation in each regional capital and subsequently all of Cameroon.

3) SOURCES

The data presented here are produced by the National Institute of Statistics as part of monthly monitoring of inflation.

Chapter 21 : ENERGY AND WATER

1) *PRESENTATION*

The management of the country's water and energy resources is the responsibility of the MINEE. The operation of the public service and the distribution of drinking water in urban and peri-urban areas is now the responsibility of Cameroon Water Utilities (CAMWATER). In recent years, projects to increase the drinking water supply capacity have been underway in the Region. Statistics on the public drinking water supply service do not appear in this document. The electricity sub-sector has seen many significant developments in recent years in the

Region. We have the construction of the MEMVELE and MEKIN hydroelectric dams which should increase the energy supply. Data on the production of these dams are not available at the level of the MINEE Regional Delegation because these projects are centrally managed. However, the activity of the electricity distribution company is monitored. The figures contained in the tables show an increasing increase in the various indicators (production and sales, consumers, network length).

2) *DEFINITIONS*

High voltage: supply of electricity with a voltage above 60Kv.

Medium voltage: supply of electricity with a voltage between 15Kv and 33 Kv.

Low voltage: supply of electricity with a voltage between 220v and 380v. It is used most often by households.

1) *SOURCES*

The data presented in this chapter come from the activity reports of ENEO, CAMWATER and the Regional Delegation for Water and Energy.

Chapter 22 : ENVIRONMENT - FOREST AND WILDLIFE

1) PRESENTATION

Due to its geographical location in the great equatorial forest, the Southern Region includes a diverse fauna and flora. In order to allow local populations to benefit from the fruits of the forest, the State has classified the forests into communal forests and community forests.

MINEPDED distinguishes 4 types of pollution, namely atmospheric, noise, soil and

water pollution. Good management of household or industrial waste helps limit pollution, poisoning and diseases. In the Region, the HYSACAM company collects and processes household waste in the towns of Ebolowa, Kribi and Sangmelima. However, the INS SOUTH Agency does not yet have data on their activity.

2) DEFINITIONS

Protected Land Area: All areas of land in a country around which measures are taken by the

State to protect them against all forms of exploitation in order to avoid degradation.

UFA: Forest Management Unit.

3) SOURCES

The information presented in this chapter is collected at the level of the Regional Delegation of Forests and Wildlife of the SOUTH.

Chapter 23 : TRANSPORTS

1) *PRESENTATION*

Transport infrastructure, in particular roads, airports, ports and railways, makes it possible to reduce production and transaction costs, facilitate activity, increase the volume of production and drive social progress. Despite the efforts made by the Government in the sector, the South Region still suffers from a lack of transport infrastructure.

The road sub-sector of the SOUTH Region is made up in 2022 of 6,300.19 km of road including 1,519.64 km of paved roads and 4,780.55 km of dirt roads. According to the distribution by category, the road network of the Southern Region is made up in 2022 of 54.99% of municipal roads (i.e. 3,465.09 km), 25.33% of national roads (1,596.36 km) and of 19.66% of regional roads.

2) *SOURCES*

The data used in this chapter come from the activity reports of the Regional Transport and Public Works Delegations.

Chapter 24 : POSTS AND TELECOMMUNICATIONS

1) PRESENTATION

Posts and telecommunications are two different fields but always associated because they both have links to communication. Posts concern the transmission of physical mail and packages while telecommunications relate to the transmission of sound, images and waves at a distance using electronic and computer technologies.

The length in km of optical fiber in the South Region increased between 2020 and 2022. It increased from 1,360 km in 2020 to 1,450 km in 2022. Apart from CAMPOST which is the only public postal operator in the country, the number of private operators increased from 8 in 2020 to 11 in 2022.

2) SOURCES

The data used in this chapter come from the activity reports of the Regional Post and Telecommunications Delegations and the CAMPOST Agency in Ebolowa.

Chapter 25 : PUBLIC FINANCES

1) PRESENTATION

The country has long had a Public Investment Budget which is detailed by Region, Department, Communes and sectoral administrations. The management of these projects is at one of the regional, departmental, municipal or sectoral administration levels. The monitoring of the execution of this Budget has been invited to the Ministry of Economy, Planning and Regional Development. To do this, the Ministry has planned quarterly and half-yearly follow-up sessions for this BIP. During these sessions, the state of execution of this Budget is assessed.

The SOUTH Region has received in 2023 an allocation of 14,107,433,000 CFA francs in Commitment Authorization (AE) and 13,422,233,000 CFA francs in Payment Credit

(CP) unlike the 12,842,122,000 CFA francs in AE and CP of 2022. At the end of this year 2023, 2,456,897,000 CFA francs had been liquidated to pay the various service providers. In 2023, the SUD had 666 projects registered in the BIP and among these 635 saw their work start during the year and only 565 were completed. Concerning the CTDs, they had 542 projects registered in the 2023 BIP for CPs ranging from a minimum of 201,000,000 CFA francs to a maximum of 1,057,578,000 CFA francs. The levels of physical execution range from a maximum of 100% to 38.66%. Within the Delegations of the various ministries, the CPs range from 4,900,000 CFA francs to 3,523,929,000 CFA francs. The levels of physical execution show a minimum of 9.86% and maximums of 100%.

2) SOURCES

The data used in this chapter comes from the Regional Delegation of the Ministry of

Economy, Planning and Regional Development of the SOUTH.

Chapter 26 : CAMEROON IN BRIEF

1) PRESENTATION

The presentation of Cameroon is made following the analysis of the tables from the national accounts for the year 2022. It should be noted that the growth rate of Gross Domestic Product (GDP) stands at 3.6% in 2022 after 3, 3% in 2021. This increase between 2021 and 2022 is due to the increase in activity observed in the tertiary sector. Its contribution to GDP is increasing in 2022. It is 2.2 points in 2022 compared to 1.6 points in 2021. The contribution of

the secondary sector to GDP is down compared to that of 2021. It is 0.7 % in 2022 against 0.9 5.1% in 2021 while the contribution of the primary sector remained stable at 0.5 point. The evolution of economic activity in the sectors shows an increase in the primary sector (3.2% in 2022 compared to 2.9% in 2021), a decrease in the secondary sector (2.7% in 2022 compared to 4. 0% in 2021) and an increase in the tertiary sector (4.3% in 2022 after 3.0% in 2021).

2) SOURCES/SOURCES

The data presented in this chapter come from the NIS.

3) LIST OF TABLES

Table 26. 1 : Current GDP, production perspective (in billions of CFA F).....	357
Table 26. 2 : GDP in constant prices (2016 reference), production perspective (in billions of CFA F)	357
Table 26. 3 : GDP in chained volumes (2016 reference), production perspective (change in volumes in %) %).....	357
Table 26. 4 : Breakdown of GDP by sector of activity (in billions of CFA francs).....	358
Table 26. 5 : <i>Evolution of GDP in chained volumes (reference 2016) by business sector</i>	359
Table 26. 6 : <i>Contribution of sectors of activity to real GDP growth (in %)</i>	360
Table 26. 7 : GDP and its expenditures (in billions of CFA F).....	361
Table 26. 8 : GDP in chained volumes and its expenditures (in billions of cfa f).....	361
Table 26. 9 : <i>GDP and its expenditures (growth in %)</i>	362
Table 26. 10 : Contributions of GDP's expenditures to its growth (in %)	362
Table 26. 11 : GDP and its expenditures – évolutions of prices (in %)	363
Table 26. 12 : <i>Foreign trade, main export and import products (in billions of CFA F)</i>	364
Table 26. 13 : <i>Evolution of the index (base 100= Year 2022) of the prices of the different consumption functions over the years</i>	365
Table 26. 14 : Evolution of the index (base 100 = Year 2022) of the prices of the different regions over the years	366

4) TABLES
